

UNITEAM TRAINING

IMIST (Oil & Gas Industry International Minimum Industry Safety Training)

Course Overview

IMIST is an OPITO standard which supports the global Oil and Gas Industry to meet safety initiative targets. IMIST has been developed to provide a new global standard for Health & Safety Training, which will provide a comprehensive and consistent level of training across the world and enhance work force safety and compliance. The IMIST standard ensures that workers have the necessary safety awareness and training to reduce risk and ultimately reduce the number of incidents.

IMIST online is an interactive e-Learning training program that works by assessing the safety knowledge of an oil and gas worker during a random sequence of assessment questions. At the end of this assessment, which is completed under time-bound conditions, the program will automatically and dynamically assemble a unique course for each individual based on their knowledge gaps identified in the pre-assessment. The candidate is then presented with this content and the relevant summative assessment questions. This process is repeated until the candidate has managed to answer all the assessment questions correctly. A 100% pass mark is required to complete the IMIST program.
